## PRESENTATION OF DISCONTINUED 1969 COMMODITIES IN 1970 IMPORT QUARTERLY REPORTS

Effective January 1, 1970 83 new import commodity classes were established and 31 former classes were discontinued. The class code for 23 additional former commodity classes were changed and in these cases there was no change in commodity description or coverage.

Of the 31 discontinued classes only 3 were renumbered and included to existing classes. The remaining 28 discontinued classes were retained because the content of the former classes is now included in 2 or more existing classes; the renumbering of these classes will not improve commodity comparison.

Table I shows the 1970 classes under which the renumbered (change in code only) 1969 classes are presented in the 1970 quarterly import reports together with the former 1969 class code.

Table II lists the 1970 classes under which the 3 discontinued 1969 classes are presented together with the former class code.

Table III list the 28 discontinued classes which retained the same class code; for these commodity classes no totals appear in the 1970 columns.

Table IV shows the new 1970 classes for which there are no direct 1969 commodity comparison.

## EXPLANATORY NOTES

1. **Source of Data:** Import documents collected by Customs are the basic source of import statistics, except for data on imports of electricity. These types of imports are reported by the importing firms directly to the Dominion Bureau of Statistics.
2. **Time Periods:** Import statistics for any period include all goods declared on import entries received at DBS during the calendar period, and on electricity reports received within the following calendar month. There is a lapse of up to a week between the actual customs clearance of imports and receipt of the relevant documents in DBS. Electricity imports are usually included in statistics for the period in which these imports actually occurred.
3. **Coverage:** From January 1, 1964, imported statistics have included all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses on arrival. For 1963 and earlier years import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouses and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on one of the blue pages included in the January-March, 1964 issue of this report.

The following commodity movements are excluded from import statistics: gold and gold products where the value of the gold content is 80% or more of the total value except for dental gold alloy (class 880-27) and a small amount of gold scrap in the form of jewellers' sweepings (class 258-99); current coin; settlers' effects; private donations and gifts; tourist purchases exempt from duty; goods imported by foreign armed forces of diplomats stationed in Canada or brought back by Canadian armed forces or diplomats returning from postings outside Canada; temporary imports for exhibition or competition, and film imported for exhibition or processing or returned after exhibition or processing abroad; ships of British construction and registry imported for use in Canada, and ships purchased for use as international carriers but not used to carry goods between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory. Until January 1, 1966, aircraft purchased for use as international carriers and not used to carry goods between points in Canada were also excluded.

4. **Countries Credited:** Imports are credited to the country in which the goods were located when first directed to Canada, except for goods produced in Central or South America but first consigned to Canada from the United States, which are credited to the country of origin.
5. **Quantities:** Table 2 shows quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. I (DBS Catalogue No. 12-524). Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). All units of quantity used in this report are defined on page 5.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but at least in recent years importers have often reported c.i.f. values for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1960); raw sugar (from January, 1963, retroactive to January, 1961); all shipments individually valued at \$50,000 or more (from January, 1965; when this check was introduced in January, 1964 it covered only shipments individually valued at \$100,000 or more). Only about one-quarter of the value of imports is covered by these specific checks.
7. **Abbreviations:** Many descriptions of commodities used in this report are abbreviated or incomplete. Full descriptions of all commodities appear in the Import Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".
8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each quarterly report.

## EXPLANATORY NOTES

1. **Source of Data:** Import documents collected by Customs are the basic source of import statistics, except for data on imports of electricity. These types of imports are reported by the importing firms directly to the Dominion Bureau of Statistics.
2. **Time Periods:** Import statistics for any period include all goods declared on import entries received at DBS during the calendar period, and on electricity reports received within the following calendar month. There is a lapse of up to a week between the actual customs clearance of imports and receipt of the relevant documents in DBS. Electricity imports are usually included in statistics for the period in which these imports actually occurred.
3. **Coverage:** From January 1, 1964, imported statistics have included all goods which are cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses on arrival. For 1963 and earlier years import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouses and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on one of the blue pages included in the January-March, 1964 issue of this report.

The following commodity movements are excluded from import statistics: gold and gold products where the value of the gold content is 80% or more of the total value except for dental gold alloy (class 882-99) and a small amount of gold scrap in the form of jewellers' sweepings (class 258-99); current coin; settlers' effects; private donations and gifts; tourist purchases exempt from duty; goods imported by foreign armed forces of diplomats stationed in Canada or brought back by Canadian armed forces or diplomats returning from postings outside Canada; temporary imports for exhibition or competition, and film imported for exhibition or processing or returned after exhibition or processing abroad; ships of British construction and registry imported for use in Canada, and ships purchased for use as international carriers but not used to carry goods between points in Canada; bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory. Until January 1, 1966, aircraft purchased for use as international carriers and not used to carry goods between points in Canada were also excluded.

4. **Countries Credited:** Imports are credited to the country in which the goods were located when first directed to Canada, except for goods produced in Central or South America but first consigned to Canada from the United States, which are credited to the country of origin.
5. **Quantities:** Table 2 shows quantities in terms of the units specified for each class in the Import Commodity Classification, Vol. I (DBS Catalogue No. 12-524). Where no unit of quantity is specified, the quantity columns are empty.

Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain special cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit can not be calculated). All units of quantity used in this report are defined on page 5.

6. **Values:** The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but at least in recent years importers have often reported c.i.f. values for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1960); raw sugar (from January, 1963, retroactive to January, 1961); all shipments individually valued at \$50,000 or more (from January, 1965; when this check was introduced in January, 1964 it covered only shipments individually valued at \$100,000 or more). Only about one-quarter of the value of imports is covered by these specific checks.
7. **Abbreviations:** Many descriptions of commodities used in this report are abbreviated or incomplete. Full descriptions of all commodities appear in the Import Commodity Classification, Vol. I. The letters "n.e.s." mean "not elsewhere specified".
8. **Revisions:** All statistics in this report are subject to revision. Revisions to previous reports are published on coloured pages at the beginning of each quarterly report.
